Murat Seçmen

MS. Logistics Engineer
Ankara, Türkiye

Özet

Experienced Industrial Engineer with a master's degree in Logistics Engineering, utilizing leadership skills to oversee and manage operations in demanding and complex environment. Formal military background, training, and experience, responsible for planning, staging, execution, and reporting. Extensive experience working in transportation and supply chain sector as an experienced engineering/managerial role. Expert-level proficiency with major analytics tools such as Microsoft Excel, Excel VBA, Google Sheets. Advanced level proficiency with Python and R for data analytics and Power BI for data visualisation. Desire to improve analytical skills using different sources where there will be academic and professional development opportunities.

Deneyim

Turkish Aerospace
Leader Engineer/Production Planning and Control
Haziran 2023 - Present (1 yıl 10 ay)
Ankara, Turkey

- Utilize data-driven analytics to foster collaboration among cross-functional teams encompassing manufacturing, production, and internal distribution.
- Leverage data-driven insights to oversee internal logistics functions, encompassing transportation, warehousing, and distribution.
- Optimize rack and tool assignment in warehouses using data science and optimization techniques.

As an industrial consultant, I am proud to share the significant achievements of the project I have been advising, titled "A Comprehensive Approach to Optimal Tool Placement, Storage Location Assignment and Warehouse Selection."

Secured first place in the Industrial Engineering category at the 19th Student Project Competition organized by Hacettepe University.

Received funding under the TÜBİTAK 2209-B program for project encouragement.

DHL Supply Chain

Value Creation Executive

Aralık 2021 - Eylül 2022 (10 ay)

İstanbul, Türkiye

- Measuring and Tracking Impact of Cost Savings Projects (Saving Calculation) of the client,
- What-If Scenario Estimations (Transport Mode & Route Change, Delivery Frequency Adjustment, Order Delivery Time Window Optimization),
- Distribution Network Design and Deployment of New Processes,
- Operations Efficiency, Cost Analysis Studies,
- Procurement Support (Freight Rate Analysis, Distribution Network Profiling),
- Location Analysis.

Having conducted 14 projects for international clients with the result of 14% cost saving

Carbon Emission Reduction with the 3% overall for these projects in 2022 and beyond.

Ekol Lojistik

Transport Network Design Specialist

Kasım 2020 - Aralık 2021 (1 yıl 2 ay)

İstanbul, Türkiye

- Analyse loading/unloading activities, identify shipment characteristics according to its delivery address, review related information to develop and evaluate customers' material and implement solutions, before solving complex cargo loading problems under assumed parameters (gross weight, lademeter, volume).

Having proposed and implemented a project for all intermodal clients for their FTLs to bring a systematic understanding to Operational Department.
